

RAJESWAREE NATH

Computer Science & Technology | Java Full Stack | React JS | Python | ML/NLP Research
nathrajeswaree26@gmail.com | linkedin.com/in/rajeswaree-nath/ | github.com/nathrajeswaree26-netizen

CAREER OBJECTIVE

Computer Science and Technology undergraduate with hands-on Full Stack Java internship experience and a strong interest in software engineering, Machine Learning, Deep Learning, Natural Language Processing, Explainable AI, and cybersecurity. Seeking opportunities to apply Java, web development, AI/ML and research skills to build reliable, practical and secure technology solutions while continuing to grow as a software developer and researcher.

EXPERIENCE

Full Stack Java Intern - MindBrain Innovations Private Limited

Internship Focus: Full Stack Java Development | Software Engineering | Web Application Development

Completed a hands-on internship focused on Full Stack Java development and practical software engineering. Gained exposure to designing application components, developing backend logic, integrating frontend and backend layers, working with relational databases, debugging application issues, and following structured development and testing practices. Strengthened understanding of object-oriented programming, Java-based application development, database connectivity, REST-oriented application concepts and end-to-end application workflows.

Worked in a project-oriented learning environment that improved problem-solving, code organization, debugging, communication, teamwork and understanding of the software development lifecycle. The experience also helped bridge academic concepts with practical application development and strengthened readiness for professional software engineering roles.

EDUCATION

B.Tech - Computer Science & Technology

Currently pursuing

Higher Secondary (12th)

Secondary (10th)

Nalanda Institute of Technology

CST Branch

Mahapurusha Hadidash Mahavidyalaya, Chhatia - 75%

Sashidevi Girls High School, Chhatia - 83.17%

TECHNICAL SKILLS

Programming	Java, Python, C, JavaScript
Frontend	HTML5, CSS3, React JS, Vite, Axios, React Router
Backend / Database	Spring Boot, REST APIs, MySQL
Machine Learning	Scikit-learn, SVM, Logistic Regression, Naive Bayes, Decision Tree, XGBoost
Deep Learning / NLP	TensorFlow, Keras, PyTorch, LSTM, BiLSTM, BERT, RoBERTa, Sentence-BERT
Explainable AI	SHAP
Tools	Git, GitHub, VS Code, Jupyter Notebook

RESEARCH & KEY PROJECTS

Rumour Detection on Social Media

- ML/DL project for detecting rumours from social-media text using TF-IDF, classical ML models, LSTM, BiLSTM, BERT and RoBERTa.

BERT-Based Fake Odia News Detection

- Research on Odia fake-news detection using Sentence-BERT representations and SVM classification.

SHAP-Enhanced GPT Embedding Framework for Hate Speech Detection

- Research framework combining GPT-based embeddings with SHAP explainability for hate-speech detection and interpretable predictions.

Multilingual Fake News Detection

- Ongoing multilingual NLP research using transformer and deep-learning approaches for misinformation detection.

PUBLICATION

BERT-Based Fake Odia News Detection - Accepted for ETAICT 2026, an IEEE Web of Science indexed International Conference at ITER, SOA University. DOI: 10.1109/ETAICT69135.2026.11541782.

SOFTWARE DEVELOPMENT PROJECTS

E-Commerce Management System

- Designed as a management-oriented application for products, customers, orders and core e-commerce workflows, emphasizing structured application and database operations.

Personal Portfolio

- Responsive portfolio website using React and modern CSS with a dark glassmorphism interface, interactive navigation, research, publications, achievements, certifications and project sections.

Bank Management System - Java Swing

- Desktop banking application using Java Swing concepts for customer, account and transaction-oriented management with a focus on structured GUI-driven workflows.

Return, Issue & Desk Management

- Management application concept for tracking issue and return activities and maintaining desk-related records to improve organization, monitoring and operational tracking.

RESEARCH INTERESTS

- Fake News & Misinformation Detection
- Hate Speech Detection
- Natural Language Processing
- Large Language Models & Transformers
- Explainable AI
- Multilingual / Low-Resource NLP
- Cybersecurity & AI Security
- Malware Detection & Analysis
- Phishing Detection
- Social Media Security
- Adversarial Machine Learning
- Trustworthy AI

RESEARCH METHODOLOGY

Dataset: Collection, preparation and organization of relevant research datasets.	Preprocessing: Cleaning, normalization, tokenization and preparation of textual data.
Representation: TF-IDF, contextual embeddings, sentence embeddings and transformer representations.	Model Training: Classical machine learning, recurrent neural networks and transformer-based models.
Evaluation: Performance assessment using suitable classification metrics and comparative analysis.	Explainability: SHAP-based analysis to understand model behavior and feature contributions.

ACADEMIC & TECHNICAL HIGHLIGHTS

- IEEE Web of Science indexed conference paper accepted for ETAACT 2026 at ITER, SOA University.
- Completed Full Stack Java internship at MindBrain Innovations Private Limited.
- Active research in fake-news detection, hate-speech detection, multilingual NLP and Explainable AI.
- Experience with BERT, RoBERTa, Sentence-BERT, TensorFlow, Keras, PyTorch and SHAP.
- Coding practice through HackerRank and LeetCode.

CERTIFICATIONS & AWARDS

Certifications, academic excellence, awards and other verified achievements are maintained in the portfolio's dedicated Certifications and Achievements sections.

SELECTED TECHNOLOGIES

Java • Python • C • JavaScript • React JS • Vite • Axios • React Router • Spring Boot • MySQL • Scikit-learn • TensorFlow • Keras • PyTorch • Transformers • BERT • RoBERTa • Sentence-BERT • SHAP • XGBoost • Pandas • NumPy • Git • GitHub
